

BioShield

Foaming Disinfectant

Thorough disinfection of all classes of livestock housing.

- High foaming properties
- Potent prolonged effect
- Highly effective in the presence of organic matter
- Effective against bacteria, viruses, mycoplasma and fungi
- Defra approved (for use under Diseases of Poultry Order and the Avian Influenza and Influenza of Avian Origin in Mammals Order)

BioShield

BioShield has been designed to meet the requirements of modern bio-security systems and programmes. The unique combination of glutaraldehyde and cocobenzyl dimethyl ammonium chloride work together to achieve the optimum bio-secure environment. Glutaraldehyde damages the cell wall, inhibits metabolism in bacteria and damages the protein coat of viruses, while cocobenzyl dimethyl ammonium chloride damages the cell membrane of bacteria and the lipid envelope of viruses.

GENERAL PROPERTIES

A blend of glutaraldehyde, chelating agents and surfactants with foam-enhancing properties. BioShield is broad spectrum and effective against viruses, bacteria, mycoplasma and fungi. It is highly active in the presence of organic matter and can be used effectively in both hard and soft water. The special foaming properties of BioShield give not only a rapid action, but a longer-lasting contact killing time than normal conventional disinfectants, therefore improving bio-security by producing the best possible environment for the young animal and allowing maximum time for passive immunity and vaccination to provide protection.

INSTRUCTIONS FOR USE

After washing and cleaning thoroughly, apply at the required dilution rate via a power washer and foaming lance, or other foam generating equipment, covering all surfaces with an even layer of foam. Avoid excess application as this will result in premature movement and downward drift. Alternatively, use at the required dilution rate via a power washer set at low pressure (1000 psi) with a wide-angled jet.

RECOMMENDED DILUTION RATES

Routine disinfection: 1:200

General orders: 1:70

Newcastle disease & Avian Influenza: 1:310

Toxic by inhalation and if swallowed. Causes burns. Risk of serious damage to eyes. May cause sensitisation by inhalation and skin contact. Toxic to aquatic organisms. Keep locked up and out of reach of children. Keep container tightly closed in a cool well ventilated place. Wear suitable protective clothing, gloves and eye / face protection. In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. After contact with skin wash immediately with plenty of water. If swallowed do not induce vomiting; seek medical advice immediately and show this container or label. In case of accident, or if you feel unwell, seek medical advice immediately and show the label where possible. Avoid release to the environment. Refer to safety data sheet. Contains Glutaraldehyde & ADBAC.

Batch Number: 102311

Manufacture date: 26/08/2015

Expiry date: 08/2017

Manufactured in U.K.
